AI Workshop
Business Track

Kathmandu Model College · BBA / BBM / BBS

🧭 **Perception Map**
15 min · Session 1

🪞 **Mirror Exercise**
20 min · Session 3

🏁 **Prompt Relay Race**
20 min · Session 3

🤔 **Would You Rather**
10 min · Any break

💥 **Myth Buster Quiz**
15 min · Session 2

⚡ **AI Speed Dating**
20 min · Session 2

🔥 **Hot Seat Game**
15 min · Session 4

🔄 **Reverse Prompt**
15 min · Session 3

💬 **Post-it Storm**
10 min · Opening

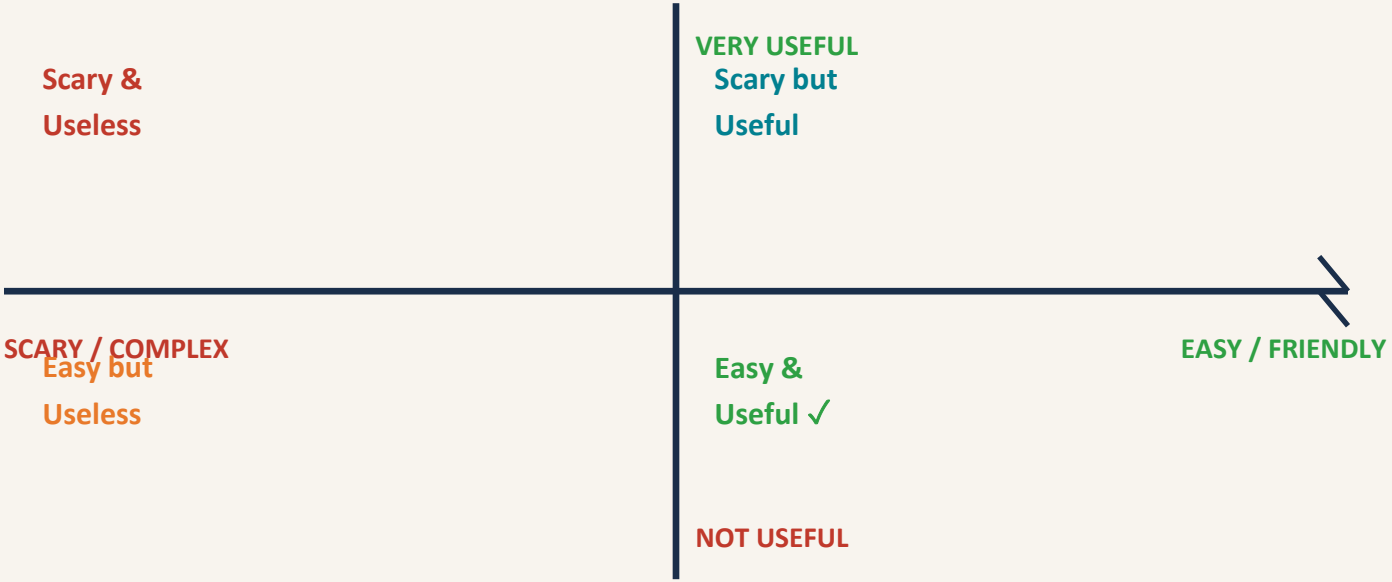
🐟 **Fishbowl Debate**
20 min · Closing

Perception Map — How Do You See AI?

⏱ 15 min

What is a Perception Map?

A perception map plots ideas, people, or brands on two axes based on how you personally perceive them — revealing hidden assumptions, biases, and mental models.



🖍️ Perception Map — Your Turn (Group Activity)

⏱️ 15 min

ITEMS TO PLOT ON YOUR MAP:

- A. ChatGPT / Claude / Gemini
- B. AI replacing my job
- C. Prompt engineering
- D. AI for marketing
- E. AI image generators
- F. AI hallucinations
- G. AI studying for exams
- H. AI business plans

INSTRUCTIONS:

1. Draw the axes on paper (or use sticky notes on the whiteboard)
2. Each person places all 8 items independently — do NOT discuss yet
3. Compare: where do your maps differ? Why? Discuss in pairs.
4. Class share: Which item caused the most disagreement? Why?

🎯 Goal: Discover where your current AI assumptions are — and shift them by Day 2

💥 AI Myth Buster — True or False? (Team Quiz)

⏱ 15 min

Teams of 5. Raise your hand for TRUE 🙌 or cross your arms for FALSE ✕. 1 point per correct answer.

Q1	**AI can think and feel emotions just like humans**	FALSE	AI processes patterns — it has no consciousness, emotions, or opinions
Q2	**ChatGPT searches the internet in real time for every answer**	FALSE	LLMs use trained knowledge; only tools with web search access the internet live
Q3	**Using AI in your job is a form of cheating**	FALSE	AI is a productivity tool — like spreadsheets or calculators. Using it is a skill.
Q4	**AI can confidently state false information as fact**	TRUE	This is called "hallucination" — AI sounds confident even when completely wrong
Q5	**A well-written prompt can dramatically change AI output quality**	TRUE	Prompt engineering is the #1 skill for getting exceptional AI outputs

⚡ AI Speed Dating — Structured Partner Rotation

⏱ 20 min

Sit in two rows facing each other. Every 3 minutes the outer row rotates. You have exactly 3 minutes per partner!

Round 1	INNER: Share 1 business task you do weekly that takes 1+ hour OUTER: Tell them which AI tool could cut that time to 5 minutes
Round 2	INNER: Describe a business you want to start someday OUTER: Name 3 ways AI could help launch that business faster
Round 3	INNER: Name your biggest fear about AI in the workplace OUTER: Give 1 reason that fear is exaggerated — and 1 reason it is valid
Round 4	INNER: Write a 1-sentence weak prompt on your card OUTER: Improve it using RCTC in 90 seconds — out loud, explaining each addition
Round 5	INNER: Name an AI tool you've never tried but are curious about OUTER: Tell them exactly how to get started with it (steps, cost, first task)
Bonus	INNER: Name an AI tool you've never tried but are curious about OUTER: Tell them exactly how to get started with it (steps, cost, first task)

⏰ Use a phone timer! 3 min per round. Rotate only when the bell rings. No skipping!

The Mirror Exercise — Human vs AI

⏱ 20 min

1

YOU answer first

"Write a 3-sentence Instagram caption for a new Nepali tea brand targeting youth"

2

AI answers next

Open ChatGPT or Claude. Use the EXACT same prompt. No RCTC — just the raw question.

3

Compare & Reflect

Side by side: Who was more creative? More specific? More useful? Which words surprised you?

4

Improve the prompt

Now apply RCTC. Add Role + Context + Constraints. Run it again. How much better is the AI output?

💡 Key insight: The Mirror Exercise shows you exactly how much better prompting makes AI output

🏁 Prompt Relay Race — Group Collaboration Game

⏱ 20 min

HOW IT WORKS — 5 students, 1 prompt, each person improves it once:

Player 1 The Starter	Write the simplest possible weak prompt for the task card you receive
Player 2 Add the ROLE	Take Player 1's prompt and add only the Role element (R from RCTC) — pass it on
Player 3 Add CONTEXT	Add Context — background information, audience, situation, Nepal-specific details
Player 4 Add the TASK	Sharpen the task — make the output requirement specific, measurable, and clear
Player 5 Add CONSTRAINTS	Add final constraints: format, length, tone, things to avoid. This is the final prompt.

🏆 Group with the most improved prompt wins! Judge: Which prompt got the best AI output?

🤔 Would You Rather? — AI Edition (Quick Poll)

⏱ 10 min

Stand up if you choose LEFT. Stay seated if you choose RIGHT. No explaining yet — just react!

AI writes ALL your marketing copy	OR	AI writes NONE — you do it all manually
AI that is always 80% accurate	OR	AI that is 100% accurate but takes 5× longer
Use AI secretly in your job	OR	Openly declare all AI usage to your employer
AI chooses your business partners	OR	AI manages your finances automatically

💬 After each round: "Why did you choose that side?" — 3 students share their reasoning

🔄 Reverse Prompt Challenge — Guess the Prompt!

⏱ 15 min

The facilitator shows an AI OUTPUT. Your job: reconstruct the PROMPT that created it. Work in pairs.

OUTPUT 1

"Namaste Nepal Trekking offers unparalleled mountain experiences for adventure-seekers. Whether you want the classic Everest Base Camp trek or a hidden gem off the beaten path, our AI-powered itinerary builder personalises your journey based on your fitness level, budget, and travel dates. Book your dream Nepal adventure today."

HINT: Tourism startup landing page tagline for a specific audience

OUTPUT 2

"Week 1: Post a behind-the-scenes reel (Instagram). Week 2: User-generated content challenge (#MyNepalTea). Week 3: Collaborate with 3 micro-influencers in Kathmandu. Week 4: Run a 20% off flash sale via Facebook Stories."

HINT: A marketing calendar for a Nepali product brand — 1 month

🎯 Whose reconstructed prompt got the closest output when tested? That pair wins the round!

🔥 Hot Seat — AI or Human? (Guessing Game)

⏱ 15 min

1 volunteer sits at the front. The class asks questions. They can answer AS THEMSELVES or secretly let AI answer on their laptop. Class must guess: Is this person or AI speaking?

QUESTION CARDS — Moderator reads one at a time:

Q1	What is the best marketing strategy for a tea brand in Nepal?
Q2	Why might AI be bad for small local businesses?
Q3	How would you convince a 60-year-old shop owner to use AI?
Q4	What is your biggest worry about AI taking jobs in Nepal?
Q5	Design a 1-week social media plan for a restaurant in Pokhara.

🏆 After reveal: Discuss — which AI answers were TOO polished? Which felt genuinely human?

💬 Post-it Storm — AI Ideas for Nepal

⏱ 10 min

Each student writes 3 sticky notes. No judgement. No explanation. Just ideas. Go!

YELLOW STICKY — An AI tool you want to try this week

ORANGE STICKY — A Nepal business problem AI could solve

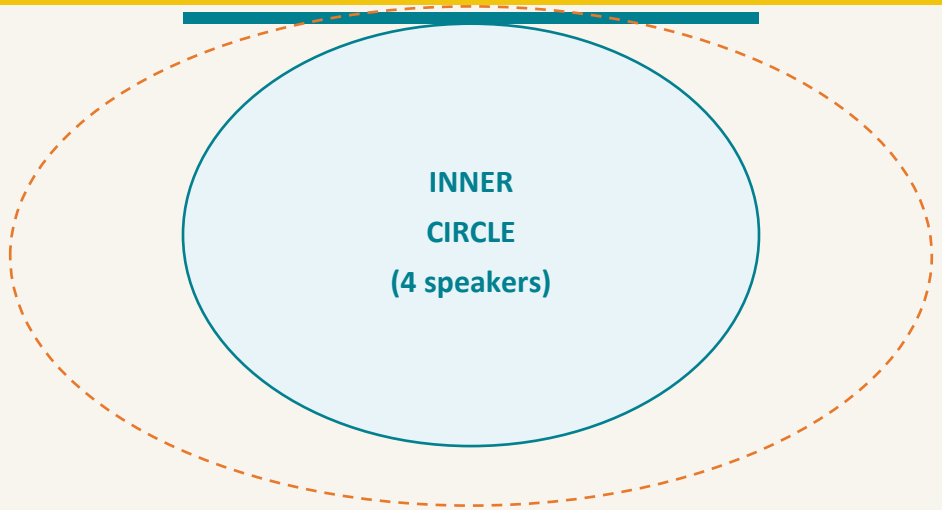
TEAL STICKY — A job role you think AI will change the most

AFTER WRITING: Stand up, walk to the board, place your sticky notes in the correct category. Read 2 notes from the board. Class discusses the most popular ideas.

🌟 Top 3 voted ideas become group challenge problems for the Startup Sprint!

🐟 Fishbowl Debate — AI for Good or AI for Harm?

⏱ 20 min



OUTER CIRCLE — Observers (rest of class)

1. Inner circle speakers: Make your argument for your assigned side — FOR or AGAINST AI
2. Outer circle observers: Take notes. You CANNOT speak yet. Identify the strongest arguments.
3. After 8 minutes: Outer circle taps a speaker on the shoulder to swap seats and join the debate
4. Final 5 minutes: Open floor. What did the debate change your mind about?

MOTION: "AI will do MORE good than harm for Nepal's economy by 2030"
